Sensor Service Adapter for ProH TwinDelta

Sensor Service Adapter for ProH TwinDelta

The service adapter enables easy connection to a ProH TwinDelta sensor in a workshop or in operation. It is a useful tool for commissioning, testing, troubleshooting and/or service work.

The unit connects during set up between the 16-pin connectors for field testing or directly to the sensor using the included stand-alone power supply. The adapter has a switch for "Sensor

On/Off", indications for "Power" and "Sensor Status", test/measuring terminals for analog 4-20mA, and a BNC-connector to connect to a monitor.

Precimeter Tool software is included for communication with the sensor through a PC connected with a serial communication cable RS-232 with USB-adapter.
